

ProMat 2021 Robotics & Automation Solution Center Booth Space Pre-Selection July 24-25 2019!

For over 50 years, tens of thousands of top supply chain decision-makers have attended ProMat because they know it's the premier event to find the latest solutions to enhance supply chain operations. High competition in the warehouse, distribution and e-commerce industries, dynamic environments and the need for on-demand automation has ProMat attendees in search of speed, accuracy and efficiencies like never before. That's why in 2021 industry professionals will once again look to ProMat as the resource to find the latest robotics and automation solutions to help them win in this hyper-competitive business environment.

With 53% of these ProMat attendee's laser-focused on robotics and automation solutions, ProMat 2021, held April 12-15, will feature a new Robotics and Automation Solution Center in the North Hall of McCormick Place. From G2P to AGVs and AGCs to autonomous mobile robots and articulated robotic arms to AI and motion control, this new Solution Center will be the best opportunity to showcase how your solutions play a vital role in improving receiving, storage, assembly, picking, sortation, packing and shipping operations. Exhibiting in this new Solution Center will allow you build relationships face-to-face with these industry professionals while showcasing your solutions in an immersive environment.

To kickoff this new Solution Center, we are holding an early space selection that will occur in July 24-25, 2019 specifically for booths and exhibitors that qualify to exhibit within this designated area of the show floor. Participating in the pre-selection process will be the first and best opportunity to reserve premium exhibit space in the ProMat 2021 Robotics & Automation Solution Center. **The deadline to submit your space agreement to participate in this early selection process will be July 17, 2019.** The space agreement and full details about this early selection process can be found at www.promatshow.com/robotics.

Do not miss this opportunity to position your company as a solutions provider and industry leader in this fast and dynamic sector of the material handling and logistics industry! Please take a moment to review the enclosed information. If you are interested in exhibiting in this exciting new Solution Center or if you have any questions, please contact the MHI sales staff directly at:
